

# Distributed Computing

2010/2011

## Assignment

Submit an original short paper (aprox. 4 pages) on one of the following options:

1. Relate one topic that interests you (e.g. in your previous research) with distributed computing. For instance, how such research applies to distributed computing or how distributed computing can help with it.
2. Pick a paper on distributed computing and speculate on a possible additional contribution. Make an effort in demonstrating that it has not been achieved yet.
3. As a last resort, provide a summary of the state of the art on some topic in distributed computing. Make sure that you come up with a novel view of this work and make a convincing argument that you understand it in depth.

You are encouraged to check your idea with one of the lecturers.

## Date

Send your short paper by email to `jop@di.uminho.pt` until 2011/01/31.
